

# LSP Servomotors

## Order Catalogue

**Series:**

LSP servomotors with optional planetary gear  
Stall torque: 0.18 to 18.5 Nm

**Order Catalogue: LSP Servomotors**

ID no.: 0814.28B.1-01

Date: 08/2014

Subject to technical change without notice.

The German version is the original of this Order Catalogue.

# LSP Servomotors

The following double-page spread sets out the contents of the Order Catalogue.

This catalogue contains key information relating to the power capabilities of LSP servomotors. Please take some time to familiarize yourself with it.

## Section 1: Basic information

Selection procedure .....	1-1
Ambient conditions and base configuration .....	1-2
Abbreviations and definitions .....	1-3
Declaration of conformity for LSP servomotors .....	1-4
Lifetime .....	1-5
Order code .....	1-7
Brakes option .....	1-9
Absolute value encoder option .....	1-11
Encoder system options .....	1-15
Overview of termination technique .....	1-16
Termination technique Y-Tec plug, standard Y17 .....	1-17
Mating plug for Y-Tec .....	1-18
Termination technique I-Tec plug, I17 and I23 plug (HIPERFACE DSL®) .....	1-19
Mating plug for I-Tec .....	1-20
Termination technique Plug M23, option W23 .....	1-21
Mating plug for W23 .....	1-22
General gear unit data .....	1-24
Option E04 planetary gear unit PLE40, LSP04 (Type-002, Type-004) .....	1-25
Option E06 planetary gear unit PLE60, LSP06 (Type-007, Type-015) .....	1-27
Option E08 planetary gear unit PLE80, LSP08 (Type-028, Type-035) .....	1-29
Option E10 planetary gear unit PLE120, LSP10 (Type-056, Type-075) .....	1-31
Option E10 planetary gear unit PLE120, LSP13 (Type-055, Type-091, Type-123, Type-185) .....	1-33

## Section 2: Overview of LSP servomotors

Motor type: LSP04-002 .....	2-3
Motor type: LSP04-004 .....	2-7
Motor type: LSP06-007, LSP06-015 .....	2-11
Motor type: LSP08-028 .....	2-15
Motor type: LSP08-035 .....	2-19
Motor type: LSP10-056, LSP10-075 .....	2-23
Motor type: LSP13-055, LSP13-091 .....	2-27
Motor type: LSP13-123, LSP13-185 .....	2-31

## Section 3: Motor and encoder cables

Ready-made motor cables for ServoOne junior .....	3-1
Ready-made encoder cables for ServoOne junior .....	3-2
Ready-made HIPERFACE DSL® cables .....	3-3
Ready-made motor cables for ServoOne CM .....	3-5
Ready-made encoder cables for the ServoOne CM .....	3-7

## Section 4: Appendix

Holding brake .....	4-2
---------------------	-----

# 1. Basic information

## Selection procedure

Basic information	To select the correct drive and motor, you need to know the specific speed and the load cycle of the drive task at hand.
 <b>1.</b>	Define supply voltage: 230 V to 400 V.
 <b>2.</b>	Define the construction windows.
 <b>3.</b>	Define maximum torque from the load cycle profile or by dimensioning via Servosoft.
 <b>4.</b>	Define the mean (effective) torque - see Engineering Guide.
 <b>5.</b>	Define the required motor or geared motor type: LSP ...
 <b>6.</b>	Select the motor on the relevant data page in line with the following criteria: Synchronous servomotor: $n_{\max} \leq 1.1 \cdot n_{\text{rated}}$ $M_{\text{eff}} \leq M_{\text{rated}}$
 <b>7.</b>	Define the required encoder system in line with requirements: resolver, absolute value encoder, pulses per revolution.
 <b>8.</b>	Complete motor or geared motor designation with all required options (type code).
 <b>9.</b>	Define the length of the required ready made power cable.
 <b>10.</b>	Define the required ready made encoder cable.
 <b>11.</b>	From the selection and order data, select the servo-controller for the chosen motor based on the standard overload conditions. Select the servo-controller according to the respective motor stall current/rated current.

## Ambient conditions and base configuration

Motor type	Permanent magnet excited 3-phase-current synchronous servomotor	
Ambient temperatures (in operation)	-10°C to +40°C	
Storage temperatures (not in operation)	-20°C to +70°C	
Humidity	<90% relative air humidity (non-condensing)	
Insulation class	F (= to 155°C) $\Delta T = 115 \text{ K}$	
Protection class	IP65 as standard (except A side, here IP21)	
Cooling	Convective (self-cooling)	
Bearing life	20,000 h under rated conditions (Mn)	
Temperature sensor	KTY	
Voltage gradient dU/dt	8 kV/ $\mu\text{s}$	
Max. site altitude	4000 metres above sea level; above 1000 metres 2% derating per 100 m	
Accurate true running, coaxiality and axial run-out to DIN 42955	N (normal)	
Vibration severity to ISO 2373	Level N	
Detent torques	LSP04	2.5% $\pm$ 0.5 % of max. rated current
	LSP06	2.0% $\pm$ 0.5 % of max. rated current
	LSP08	1.5% $\pm$ 0.5 % of max. rated current
	LSP10	1.5% $\pm$ 0.5 % of max. rated current
	LSP13	1.5% $\pm$ 0.5 % of max. rated current
Coating	Baking enamel black, RAL 9005	
Magnet material	Neodymium-iron-boron (NdFeB)	
Shaft end	Cylindrical shaft end with/without feather key way	
Balance	Q 2.5	
Measuring systems	Resolver, SinCos® SEK/SEL37, SKS/SKM36, EKS/EKM36, SRS/SRM50	
Approbations	CE, UL insulation system HE-GM1 (E 238319) / ul E466041	

## Abbreviations and definitions

Abbreviation	Unit	Explanation
$f_n$	[Hz]	Rated frequency
$i$	[-]	Gear ratio (for geared motors)
$I_0$	[A]	Stall current (motor current at stall torque $M_0$ )
$I_n$	[A]	Rated current (rated current per phase)
$I_{max}$	[A]	Peak current (maximum permissible current per phase)
$J$	[kgcm <sup>2</sup> ]	Rotor moment of inertia (rotor moment of inertia relates to a motor without brake)
$J_G$	[kgcm <sup>2</sup> ]	Moment of inertia for geared motors
$K_E$	[V <sub>rms</sub> /1000min <sup>-1</sup> ]	EMF constant (induced voltage between two phases at 1000 rpm)
$K_T$	[Nm/A]	Torque constant at nominal point (quotient of rated torque $M_n$ and rated current $I_n$ )
$K_{T,0}$	[Nm/A]	Torque constant at standstill (quotient of stall torque $M_0$ and stall current $I_0$ )
$L_{pp}$	[mH]	Winding inductance (2 phases) at rated current $I_n$ [A]
$m$	[kg]	Ground (motor ground without brake)
$M_0$	[Nm]	Stall torque (stall torque in S1)
$M_n$	[Nm]	Rated torque (rated torque in S1)
$M_{max}$	[Nm]	Peak torque (maximum permissible short-time torque)
$n_n$	[min <sup>-1</sup> ]	Rated speed
$n_{max}$	[min <sup>-1</sup> ]	Maximum speed
$p$	[-]	Number of pole pairs
$P_n$	[W]	Rated power (mechanical rated power on the shaft)
$R_{pp}$	[Ω]	Winding resistance (2 phases, at a winding temperature of 20°C)
$T_{el}$	[min]	Electrical time constant
$T_{th}$	[min]	Thermal time constant
$U_n$	[V]	Controller rated voltage
$U_{DC}$	[V]	DC link voltage

# Declaration of conformity for LSP servomotors

## EG-Konformitätserklärung

*EC Declaration of Conformity*

Der Hersteller  
*The manufacturer* LTI DRIVES GmbH  
Gewerbestraße 5-9  
35633 Lahnau

erklärt hiermit, dass die folgenden Produkte  
*declares that the following products*

Produktbezeichnung: Servomotor  
*Product designation: Servomotor*

Produkttypen: LSMx, LSP  
*Product types: LSMx, LSP*

den Sicherheitsbestimmungen der nachstehenden EG-Richtlinie entsprechen:  
*comply with the essential requirements of the following EC Directive:*

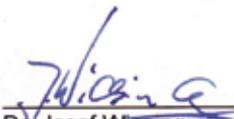

2006/95/EG [Niederspannungsrichtlinie]  
*2006/95/EC [Low Voltage Directive]*

und dass folgende angeführten harmonisierten Normen angewandt wurden:  
*and that the following harmonised standards have been applied:*

EN 60034-1:2010  
Drehende elektrische Maschinen - Teil 1: Bemessung und Betriebsverhalten (IEC 60034-1:2010)  
*Rotating electrical machines - Part 1: Rating and performance (IEC 60034-1:2010)*

EN 60529:1991/A1:2000  
Schutzarten durch Gehäuse (IP-Code) (IEC 60529:1989+A1:1999)  
*Degrees of protection provided by enclosures (IP Code) (IEC 60529:1989+A1:1999)*

## Permissible forces

### Maximum radial force $F_R$ [N]

Motor type	1000 rpm	2000 rpm	3000 rpm	4000 rpm	5000 rpm	6000 rpm	7000 rpm	8000 rpm	9000 rpm
LSP04-002	215	170	150	135	125	120	115	110	105
LSP04-004	235	185	160	150	135	130	125	120	115
LSP06-007	350	290	250	230	210	200	190	180	-
LSP06-015	390	310	270	250	230	220	205	195	-
LSP08-028	500	400	350	320	300	270	260	-	-
LSP08-035	520	410	360	320	300	280	265	-	-
LSP10-056	940	740	650	590	550	515	-	-	-
LSP10-075	970	770	680	615	570	540	-	-	-
LSP13-055	820	650	570	510	480	-	-	-	-
LSP13-091	860	680	590	640	500	-	-	-	-
LSP13-123	1100	900	790	710	660	-	-	-	-
LSP13-185	1200	960	840	760	700	-	-	-	-

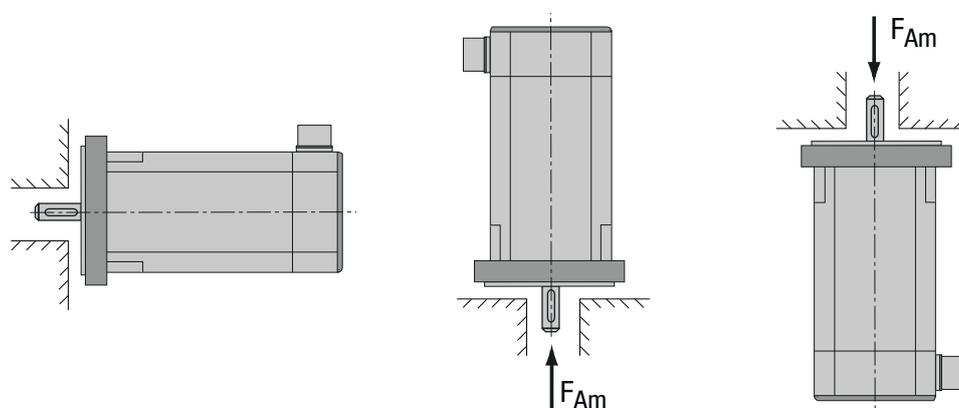

Table 3.1 Maximum axial force:  $F_A = 0.2 \times F_R$

The table indicates the maximum permissible lateral force (radial force  $F_R$ ) at the point of application  $l/2$  and the **maximum permissible axial force  $F_A$  ( $F_A = 0,2 \cdot F_R$ )** for a **service life of 20,000 h**. A lateral force not applied in the middle of the shaft end can simply be translated to allow for the changed lever ratios.

Either the permissible radial force or the axial force may act on the motor shaft! A one-off axial force of 40% of the radial force at standstill is permissible for motor installation.

## Technical data - Design

Design	B5	V1	V3
Shaft	Free shaft end	Free shaft end at bottom	Free shaft end at top
Attachment	Flange mounting Access from housing side	Flange mounting at bottom Access from housing side	Flange mounting at top Access from housing side

**NOTE:** With vertical mounting (V1) the permissible axial forces ( $F_A$ ) apply. With vertical upward mounting (V3) the permissible axial forces are reduced by the force due to weight of the rotor ( $F_G$ ).

## Brakes option

### Technical data

The brakes are permanent magnet DC voltage no-load current brake units.  
The brakes are not service brakes. Switch on and off only at speed = 0.

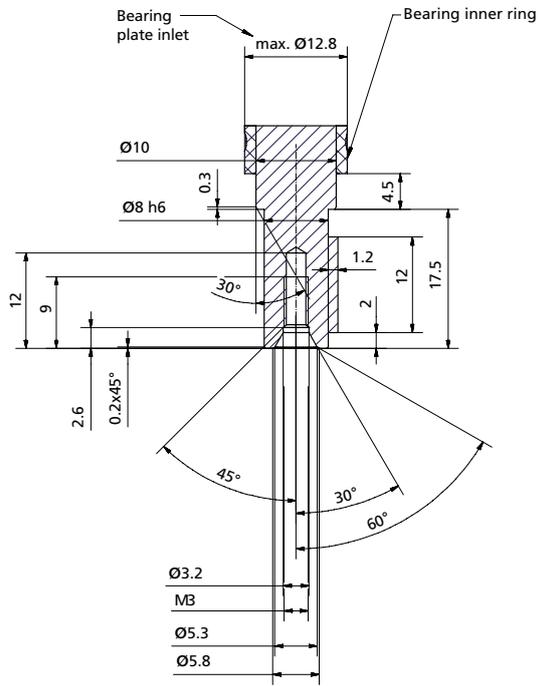

Insulation class: F (155°)  
Max. speed: 10,000 rpm  
Supply voltage: 24 V DC +6% -10%

Technical data - Brake	LSP04-		LSP06-		LSP08-	
	002	004	007	015	028	035

Brake disengagement time [ms]	40	40	40	40	50	50
Brake response delay [ms]	2	2	2	2	3	3
Closure time [ms]	20	20	20	20	40	40
Weight of motor with brake [kg]	7.4	8.75	8.0	9.4	12.2	16.4

The motors must not be run against the closed brake. The motor brake is designed as a holding brake at standstill. An emergency stop of the running motor is permissible in exceptional circumstances. The number of emergency stops is limited by the moment of inertia of the overall system.

LSP13

## Absolute value encoder option

### Resolver

RE-15

**Technical data:**

- 1 sine/cosine period per revolution
- Resolution determined by the drive controller

### Capacitive systems

SEK/SEL37

*(single/multi-turn encoder)*

**Technical data:**

- 16 sine/cosine periods per revolution
- Absolute position with a resolution of 512 increments per revolution
- 4096 revolutions measurable (multi-turn)
- Electronic rating plate

EEK/EEL37

*(single/multi-turn encoder)*

**In preparation:**

- Encoder for one-cable interface (Hiperface DSL)

## Optical systems

SKS/SKM36  
(single/multi-turn encoder)

**Technical data:**

- 128 sine/cosine periods per revolution
- Absolute position with a resolution of 4,096 increments per revolution
- 4096 revolutions measurable (multi-turn)
- Electronic rating plate

EKS/EKM36  
(single/multi-turn encoder)

**Technical data:**

- Encoder for one-cable interface (Hiperface DSL)
- 18-bit resolution of position (128 sine/cosine periods per revolution - digitalized in encoder)
- 4096 revolutions measurable (multi-turn)
- Electronic rating plate

SRS/SRM50  
(single/multi-turn encoder)

**Technical data:**

- 1024 sine/cosine periods per revolution
- Absolute position with a resolution of 32,768 increments per revolution
- 4096 revolutions measurable (multi-turn)
- Electronic rating plate

EFS/EFM50  
(single/multi-turn encoder)

**In preparation:**

- Encoder for one-cable interface (Hiperface DSL)

## Encoder system options

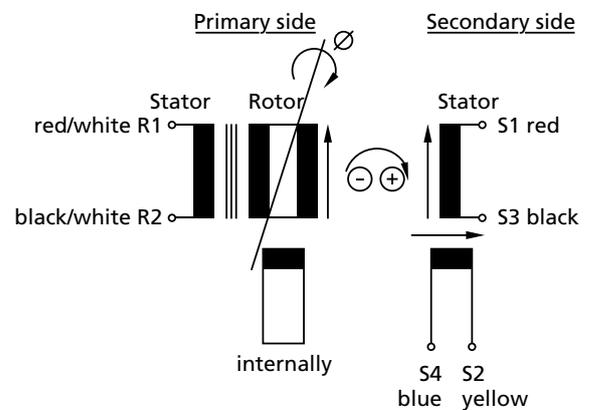

All LTi LSP motors are fitted with a resolver as standard. Various SinCos encoders with the Hiperface® interface can optionally be built on to the model series. For motors with these encoders the angle offset is written to the encoder memory.

Overview of suitable encoders:

Motor type	Resolver	Absolute value encoder					
	Standard	SEK/SEL37 (34)	EEK/EEL37	SKS/SKM36	EKS/EKM36	SRS/SRM50	EFS/EFM50
LSP04	X	X	X

## General gear unit data

### Conversion of moments of inertia

Conversion:

$$J_2 = J_1 \cdot i^2$$

- The moments of inertia given are relative to the motor shaft and the gear unit drive
- The moments of inertia given in this catalogue are relative to the gear unit and motor and, as applicable, the brake
- Designation:  $J_1$ , Unit: kgcm<sup>2</sup>
- In the catalogue,  $J_1$  is given

### Abbreviations and definitions

Abbreviation	Unit	Explanation
$i$	[-]	Gear unit gear ratio
$M_{G,n}$	[Nm]	Rated torque of the gear unit (rated torque in S1)
$M_{G,max}$	[Nm]	Maximum torque of the gear unit
$M_{max}$	[Nm]	Maximum torque of the motor
$n_n$	[min <sup>-1</sup> ]	Rated speed
$n_{out}$	[min <sup>-1</sup> ]	Drive shaft speed
$K_A$	[-]	Application factor
$J_1$	[kgcm <sup>2</sup> ]	Moment of inertia including gear unit, motor and, if applicable, brake
$\eta$	[-]	Efficiency factor

#### NOTE:

In the servo-controller of your application, limit the maximum motor torque to the maximum gear unit torque.

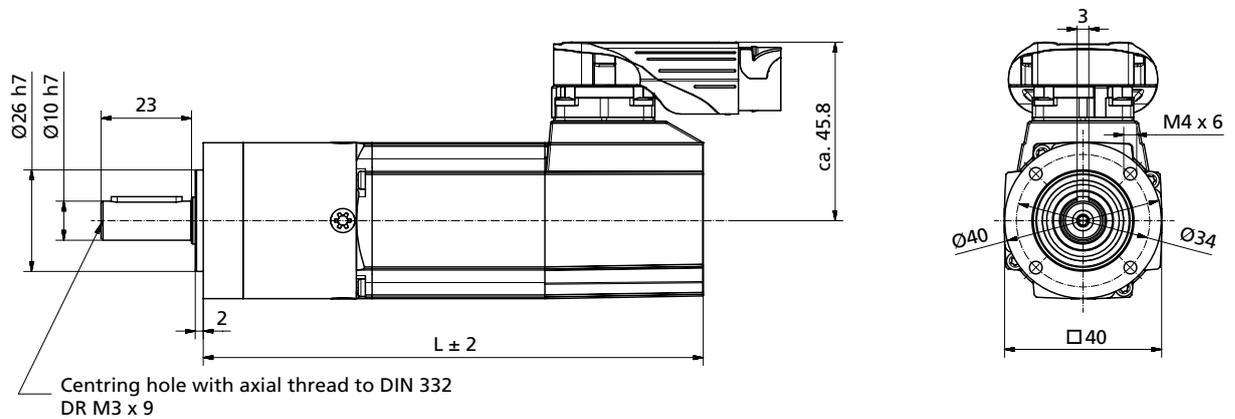

$$M_{G,max} \text{ (gear unit)} = M_{max} \text{ (motor)} \times i \times \eta$$

- 1) The data indicated refer to a drive shaft speed of  $n_{out} = 100 \text{ min}^{-1}$  and an application factor of  $K_A = 1$ , as well as the S1 operation mode.
- 2) The moments of inertia incl. gear unit, motor (with and without brake) reference the motor drive shaft, also see Page 1-24.

### NOTE:

In the servo-controller of your application, limit the maximum motor torque to the maximum gear unit torque.

$$M_{G,max} \text{ (gear unit)} = M_{max} \text{ (motor)} \times i \times \eta$$

## General technical data

Life	20000 h
Efficiency factor at rated load	1-stage: 96% / 2-stage: 94%
Min. operating temperature	-10 °C
Max. operating temperature	40 °C
Motor/gear unit protection class	IP65/IP54
Max. shaft speed	4400 min <sup>-1</sup>
Lubrication	Lubrication service life
Max. permissible axial load (at n <sub>out</sub> = 100 min <sup>-1</sup> )	2100 N
Max. permissible radial load (at n <sub>out</sub> = 100 min <sup>-1</sup> )	1200 N
Gear unit backlash	1-stage: ≤ 7 arcmin / 2-stage: ≤ 9 arcmin
Torsional stiffness	1-stage: 12 Nm/arcmin / 2-stage: 13 Nm/arcmin

LSP10-056, LSP10-075

## Dimensional drawing

## Motor lengths

Motor type		L
LSP10-056	without brake	200 mm
LSP10-056	with brake	242 mm
LSP10-075	without brake	225 mm
LSP10-075	with brake	267 mm

## Key

- 1) Radial shaft packing ring (35x25x5)
- 2) Centring hole with axial thread to DIN 332 - DS M6 (M6x16)
- 3) Swivel range of Y-Tec plug from Intercontec
- 4) Power plug
- 5) Signal plug
- 6) Feather key (optional)

## Ready-made HIPERFACE DSL® cables

### Order code

KM13 - 3PHBD - I17 - 10A KS 001	
<b>Ready-made motor cable</b>	
<b>Cable configuration</b>	<b>3PHBD</b> → 3-phase + earth + brake + HIPERFACE DSL®
<b>Connector</b>	<b>I17</b> → I17 connector, motor side
<b>Rated current</b>	<b>10A</b> → Cable cross-section 1 mm <sup>2</sup>
<b>Additional option</b>	<b>KS</b> → Capable for energy chains
<b>Cable length</b>	<b>001</b> → 1 m <b>010</b> → 10 m <b>030</b> → 30 m available cable lengths: 1 m, 2 m, 3 m, 4 m, 5 m, 6 m, 7 m, 8 m, 9 m, 10 m, 15 m, 20 m, 25 m, 30 m

## Technical data

Cable type/order designation		KM13-3PHBD-I17-10A-KSxxx <sup>1)</sup>	
Cable length		1 m to max. 30 m	
Number of poles		9	
Wiring		1 = U	1 mm <sup>2</sup>
		2 = V	1 mm <sup>2</sup>
		3 = W	1 mm <sup>2</sup>
		ye/gn = PE	1 mm <sup>2</sup>
		5 = Brake +	0.75 mm <sup>2</sup>
		6 = Brake –	0.75 mm <sup>2</sup>
		blue = Hiperface DSL +	AWG22
		white = Hiperface DSL –	AWG22
Temperature range when in motion		-20 °C to +80 °C	
Temperature range when stationary		-40 °C to +80 °C	
Protection class		connected IP 66/67	
Rated voltage	Signal plug Power plug Cable	63 V AC/DC max. 630 V AC/DC max. 1000V AC (UL)	
Rated current	Signal plug Power plug Cable	3.6 A I <sub>max.</sub> 14 A I <sub>max.</sub> 10 A I <sub>rated</sub>	
Pollution severity		3, as per EN 61984 Sec. 6.19.2.2	
Overvoltage category		III, as per EN 61984 Sec. 6.19.2.2	
Maximum site altitude		Max. 2000 m, as per EN 61984 Sec. 6.19.2.2	
RoHS compliant		Yes	
Oil resistance of outer material		HD 22.10 Appendix A, DIN EN 60811-2-1	
flame retardant		as per IEC 60332-1-2, UL758 cable flame test	
Halogen-free		Yes	
Silicone-free		Yes	
CFC-free		Yes	
Capable for energy chains		Yes	
Bending radius	fixed layout Multiple movements	5 x D 7 x D	
Diameter D		11.6 mm	
Approval		UL758 (AWM) style 21223 (sheath) and style 10492 (lead)	
Weight		0.215 kg/m	

## Ready-made motor cables for ServoOne CM

### Order code

KM14 - 3PHBD - I17 - 10A - KS 001	
<b>Ready-made motor cable</b>	
<b>Cable configuration</b>	<b>3PHBT</b> → 3-phase + earth + brake + Thermo <b>3PHBD</b> → 3-phase + earth + brake + HIPERFACE DSL®
<b>Connector</b>	<b>M23</b> → M23 connector <b>I17</b> → I17 connector (HIPERFACE DSL®-Cable) <b>M40</b> → M40 connector
<b>Rated current</b>	<b>5A</b> → Cable cross-section 0.5 mm <sup>2</sup> <b>10A</b> → Cable cross-section 1 mm <sup>2</sup> <b>16A</b> → Cable cross-section 1.5 mm <sup>2</sup> <b>24A</b> → Cable cross-section 2.5 mm <sup>2</sup> <b>35A</b> → Cable cross-section 4 mm <sup>2</sup>
<b>Additional option</b>	<b>KS</b> → Capable for energy chains
<b>Cable length</b>	<b>001</b> → 1 m <b>010</b> → 10 m <b>030</b> → 30 m  available cable length: 1 m, 2 m, 3 m, 4 m, 5 m, 6 m, 7 m, 8 m, 9 m, 10 m, 15 m, 20 m, 25 m, 30 m

You will find further information on the ready-made motor cables in the LSx servomotor catalogues and in the operation manual for the ServoOne CM axis controller.

Space for notes

A large grid of graph paper for taking notes, consisting of 20 columns and 30 rows of small squares.

## 4. Appendix

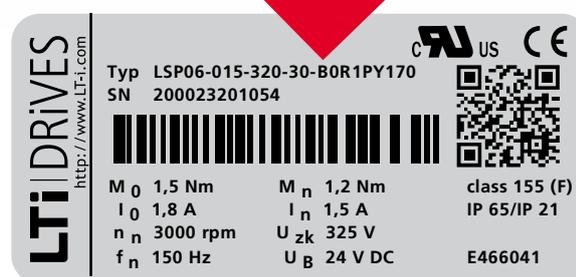

### Holding brake

The backlash-free, permanent-field single-disc holding brake works on the closed circuit principle, meaning that current needs to be applied to the brake to release it.

For optimum holding torque and lowest possible circumferential backlash, on all LSP motors the holding brake is attached directly behind the flange (on the drive side).

The holding brake is always activated and deactivated at standstill. When the holding brake is deployed as an emergency stop brake, you need to pay attention to the maximum permissible friction (WR).

An LSP servomotor with holding brake is identifiable by the name plate.

Example:

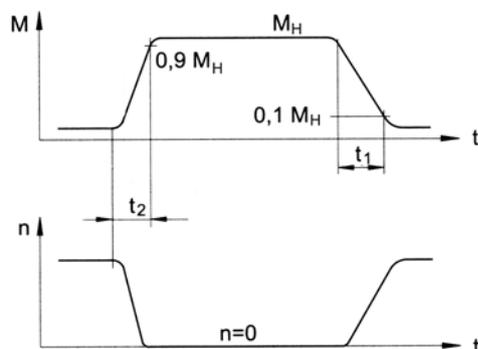

**LSP06-015-320-30-B0R1PY170**

**NOTE:** When the holding brake is deployed as an emergency stop brake, the braking torque may be substantially lower than the holding torque.

#### Holding brake response times

If DC-side switching takes place between the rectifier and coil, an extremely short run-on is attained. For drives requiring precise braking, in particular for lifting gear, DC-side switching of the brake is essential.

Letter	Meaning
M	Braking torque
$M_H$	Holding torque of spring-operated brake
N	Speed
t	Time
$t_1$	Switch-on time
$t_2$	Switch-off time
